

Digital Accounting 2025

Digital Accounting 2025 is a joint project of Lappeenranta University of Technology and Saimaa University of Applied Sciences. It responds to the challenges of the digital revolution. The new era of economics requires changes to business and service processes and opens up fresh opportunities for analytics experts.

In this two-year project, teams of company representatives, students and experts collaboratively search for the most advantageous development targets for companies. Based on the work of the teams, Digital Accounting 2025 will build and pilot a continuing education module in

digital accounting for accounting firms and financial administration professionals.

The project also promotes the development of a financial expertise network in South Karelia. The project will be concluded with a Digital Accounting 2025 seminar.

Partners in cooperation

Nine accounting offices operating in South Karelia and their 15 client companies are involved in the project. Additional project partners include local and national trade unions and business development companies, and the South Karelia Chamber of Commerce.

Digital Accounting 2025 project, duration from 1 September 2016 to 31 August 2018.
